

MICHAEL ODHIAMBO

Computer Science Graduate | Systems & IT Hardware Enthusiast

Mombasa, Kenya | mikepremium8@gmail.com | 0799013845 | <https://mikesplore.me>

PROFESSIONAL SUMMARY

Results-driven Computer Science graduate from the Technical University of Mombasa with a strong foundation in systems engineering, analytical troubleshooting, and hands-on IT diagnostics. A disciplined problem-solver and two-time fintech/AI hackathon winner with a proven track record of managing end-to-end logical workflows. Combines a deep software engineering background with practical experience in hardware troubleshooting and device diagnostics. Eager to leverage strong analytical and problem-solving skills to contribute to **BURN's** mission of delivering innovative, clean cooking technology solutions across Africa.

TECHNICAL SKILLS

Core Software Engineering

- **Mobile & Frontend:** Native Android development (Kotlin, MVVM, Clean Architecture) alongside modern web development using React.js (TypeScript/JavaScript) and responsive UI design.
- **Backend & DevOps:** End-to-end backend engineering (Python/Django/Flask, Kotlin/Ktor), secure RESTful API design (JWT, RBAC), VPSS/relay server configurations, and domain deployment pipeline management.
- **AI & Advanced Problem Solving:** Integrating LLMs with function calling, designing autonomous AI agents, and implementing algorithmic solutions like Constraint Satisfaction Problems (CSP) for resource scheduling.
- **Systems & Architecture:** Strong foundation in OOP/functional programming, system design, code refactoring, and technical writing within developer communities.

IT Support & Hardware Operations

- **Hardware Diagnostics:** Practical experience in component-level troubleshooting, device disassembly/reassembly, and executing hardware upgrades (RAM, SSD, and storage).
- **OS & Environment Provisioning:** Deploying and configuring diverse operating systems, including Kali Linux and Windows, alongside hardware-level performance testing.
- **Networking & Interfacing:** Fundamental knowledge of network configurations, establishing secure endpoints, and managing hardware-software device interfacing

KEY PROJECTS

Vela: Remote Laptop Control Platform | *Personal Project* | 2026 – Present

Tech: Python Flask, React.js, Kotlin (Android), VPSS relay, LLM function calling

- Built a cross-platform remote laptop control system with a React web interface and a native Kotlin Android app, connected via a VPSS relay server.
- Designed and implemented the Flask backend handling secure relay communication between client devices.
- Integrated an LLM with function calling capability, enabling natural language commands to trigger real device actions without a traditional parser.
- Managed the full deployment pipeline including hosting, relay configuration, and domain assignment.

AI Credit Scoring Agent (Ubunifu Hackathon; 1st Place) | *Hackathon, Fintech / AI* | December 2025

Tech: AI/LLM integration, fintech data processing, mobile

- Won 1st place building a credit scoring application that uses informal financial signals, including airtime purchases, informal loans, and micro-transactions, to generate AI-powered creditworthiness scores.

- Designed the scoring model to serve unbanked and underbanked users who lack formal credit histories.
- Owned the AI integration and data pipeline components of the solution.

MPesa Expenditure Analyzer (Build With AI; 1st Place, Unstacked Labs Certificate) | *Hackathon, Fintech / AI* | December 2025

Tech: AI agent, MPesa statement parsing, SMS analysis

- Won the Build With AI hackathon and received an Unstacked Labs certificate, delivering a working prototype of an AI agent that analyses MPesa statements and SMS transaction messages to assess spending patterns and credit worthiness.
- Rapidly prototyped and integrated an AI agent within the hackathon timeline, demonstrating speed of execution under competition conditions.
- Applied structured data extraction to unstructured mobile financial data for actionable financial insights.

Tessera; Automated Timetable Scheduler | *Personal / Institutional Project* | 2025 – Present

Tech: Constraint Satisfaction Problem (CSP), algorithm design

- Engineered a timetable scheduling system using CSP algorithms to automatically assign resources (rooms, instructors, time slots) while satisfying all academic constraints.
- Currently being piloted and tested by a school institution, validating production-readiness.
- Demonstrates algorithm depth beyond standard CRUD applications, directly relevant to software design and engineering roles.

Raylux Solar; Client Website | *Freelance* | 2026

Tech: React.js, HTML/CSS, deployment, domain management

- Designed and developed a professional website for a client in the solar installation services sector.
- Managed end-to-end delivery including design, development, deployment, and domain configuration.
- Delivered a performant, responsive site meeting the client's business requirements on schedule.

CERTIFICATIONS & COMPETITIONS

- Unstacked Labs Certificate — Build With AI Hackathon (1st Place, November 2025)
- Certificate of Participation — Zindi Hackathon: fine-tuning ML models for real-world NLP/AI tasks
- Google Developer Profile — me.developers.google.com/u/mikespire
- Active DEV Community author: technical articles on Kotlin, APIs, and software architecture

EDUCATION

Technical University of Mombasa | Mombasa, Kenya

Bachelor of Science in Computer Science (*Awaiting Graduation*)

ADDITIONAL INFORMATION

Availability:	Open to Software Engineering, Firmware/Hardware Engineering , or IT Internship roles at BURN
Work Style:	Remote-friendly, disciplined, detail-oriented, collaborative
Language:	English (Fluent) Swahili (Native)
Location:	Mombasa, Kenya Open to relocation or remote work
Portfolio:	mikespire.me
GitHub:	github.com/mikespire
Google Dev:	me.developers.google.com/u/mikespire
